# HPV

## **HPV IS SERIOUS.**

Human Papilloma Virus (HPV) causes genital warts and cancer, including genital and head & neck cancers.

## **HPV IS COMMON.**

HPV is so common that almost every person who is sexually active will get it if they're not vaccinated.

## **NOT ENOUGH PEOPLE ARE VACCINATED.**

Only about half of people age 13-17 have completed the HPV vaccine series.

## **THE VACCINE IS SAFE.**

The HPV vaccine has been around almost as long as GenZ, and has been shown to be safe and effective.

## **THE VACCINE WORKS.**

Vaccination prevents 90% of cancers caused by HPV.

## **GEN Z CAN GET THIS DONE.**

You can start now - or pick up where you left off. Call your college health center or local pharmacy to get the HPV vaccine.
